EMPLOYEES						
(as of period end)	1.978	2.002	1.879	1.908	1.944	1.973

1) Pro forma EBIT is calculated prior to non-cash charges related to the stock compensation programs and amortization and impairment of goodwill and acquisition-related intangible assets. Additionally, non-recurring expenses related to restructuring measures are not included.

2) Net cash/(debt) is calculated by subtracting total financial debt comprising of current and non-current liabilities to banks and current and non-current lease liabilities from cash and cash equivalents.

3) Working capital is defined as trade accounts receivable plus inventories minus trade accounts payable. The working capital ratio shows net working capital on the balance sheet date in relation to the revenues of the current period.

4) The return on capital employed (ROCE) is the operating result for the previous 12M period divided by the capital employed. The capital employed is the difference between the average balance sheet total and the average current liabilities of the period, calculated as the arithmetic average of the quarterly balance sheet date values for the previous five quarters. The disclosure was changed to the rolling 12M value in Q1 2022 and adjusted accordingly for prior periods.

5) The leverage shows the liabilities to banks in relation to the EBITDA of the last 12 months. EBITDA is calculated as if the accounting approach had been unchanged, i.e. without taking IFRS 16 into account. The leverage is thus determined explicitly without taking into account the accounting effects in accordance with IFRS 16.

6) The key figure describes the average number of days between invoicing and receipt of payment.

7) The key figure indicates the average number of days between receipt of invoice and outgoing payment.

8) 12-months rolling.
